Aerial-Ground Person Re-Identification Leaderboards

Qiwei Yang

Dalian University of Technology, Dalian, China
dutyqw@mail.dlut.edu.cn

Abstract. This document presents leaderboard tables summarizing reported experimental results on five Aerial-Ground Re-IDentification (AG-ReID) benchmarks. All results are collected from **formally published papers**. Therefore, Results reported only in arXiv preprints are therefore not included.

Keywords: Aerial-ground person re-identification · Leaderboards

Overview

The leaderboard tables are designed to provide a **concise, visually clear and publication-ready** comparison format. **Each table reserves the final row for users to insert their own experimental results**, and the best result under each evaluation metric is highlighted in **bold**. For readability, the reported methods in each table are divided into three groups: representative CNN-based methods, representative ViT-based methods, and methods specifically designed for AG-ReID.

Usage

The file `ag_reid_leaderboards.tex` in the current directory is the LaTeX source of `ag_reid_leaderboards.pdf`. Users may directly copy the corresponding tables from this source file for use in their own manuscripts.

Table 1: Performance comparison on AG-ReID. Best results are in **bold**.
